Professional Summary

Data & Business Intelligence professional with nearly 3 years of enterprise experience at Infosys and a Masters in Information Systems (UTA). Specializes in end-to-end data pipelines, SAP BW/HANA, Google BigQuery, and BI dashboards using Power BI, Tableau, and Looker Studio. Currently building cloud-native analytics solutions on GCP with dbt (Data Build Tool), BigQuery, and Streamlit.

Professional Experience

The University of Texas at Arlington <i>Graduate Teaching Assistant</i>	Aug 2025 - Present
- Conducted exam analytics in Excel using VLOOKUP and data cleaning to calculate per-question accuracy rates, providing professors with actionable insights to identify weak areas across the class. - Supported students in Python and Java programming courses through weekly office hours, helping debug code and strengthen understanding of core concepts. - Collaborated with faculty to streamline course delivery, maintaining structured grade records and ensuring consistent evaluation standards across assessments.	
Infosys <i>Senior Systems Engineer</i>	Dec 2021 - May 2024
- Delivered AR and procurement analytics for Levi Strauss & Co. across three global regions (LSE, AMA, LSA) as part of the S/4 Transformation project. - Designed and optimized SAP BW/HANA architecture and ETL pipelines for ECC finance data, enabling real-time AR and procurement analytics. - Developed high-performance SAP HANA calculation views and star-schema data models, reducing report generation time from hours to minutes. - Managed end-to-end HANA view transport lifecycle across Dev – QA – Pre-Prod environments and resolved post-Go Live incidents during US Hypercare, ensuring zero disruption to production reporting.	

Skills

Data Warehousing & Modeling: SAP BW/HANA, Google BigQuery, Data Modeling, Star Schema, Fact/Dimension Tables Data Pipelines & ETL: ETL Design, Data Integration and Cleaning, Automation (Python, GitHub Actions), dbt, Apache Airflow Databases & Querying: SQL, SAP HANA, BigQuery SQL Data Visualization: Microsoft Power BI, Tableau, Google Looker Studio, Streamlit Version Control & Workflow: Git, GitHub, GitHub Actions Analytics Methods: Hypothesis Testing, KPI Analysis, Exploratory Data Analysis Programming: Python Tools: SAP ABAP, SAP HANA Studio, MS Office Cloud & Infrastructure: Google Cloud Platform (GCP), AWS Cloud Technology, Docker ERP Systems: SAP, SAP S/4 HANA, SAP BI/BW	
--	--

Education

University of Texas at Arlington, TX, USA	Jan 2025 - Dec 2026
<i>Master of Science, Information Systems</i>	<i>Arlington, TX, USA</i>
Savitribai Phule Pune University, Maharashtra, India	Aug 2017 - Apr 2021
<i>Bachelor of Engineering, Mechanical Engineering</i>	<i>Maharashtra, India</i>

Projects

Formula 1 Analytics Platform GitHub	Mar 2026
- Built an end-to-end telemetry pipeline ingesting FastF1 API data into Google BigQuery using dbt with staging/mart models and 8 automated data quality tests. - Designed incremental loading strategy for weekly race data ingestion without record duplication on GCP. - Developing Looker Studio dashboards and Streamlit app for real-time driver telemetry comparison and race pace visualisation across the 2026 F1 Season. - Implementing K-Means clustering to fingerprint driver styles from telemetry features - braking points, throttle application, and cornering speed - enabling unsupervised performance profiling across the 2026 grid.	
Automated data-to-dashboard pipeline GitHub	Jan 2026
- Collaborated with stakeholders to gather requirements and designed an end-to-end automated data pipeline using Python for ingestion, transformation, and loading into Microsoft Power BI, improving decision support. - Implemented GitHub Actions to schedule workflows and enable version-controlled deployment of the analytics pipeline. - Built star-schema data models and interactive Power BI dashboards with KPIs to support product and category performance analysis.
